The mass of the approved vehicle includes: driver (75 Kg), diesel tank filled to 100% (60 liters), fresh water filled to 20 liters. (use of the special exhaust valve) and aluminum gas cylinders (max. 15 kg.) full to 90% of their capacity, and tolerance foreseen in the approval phase (+/- 5%) (2007/46 / EC). Anything not included in the standard version of the vehicle, both airframe and chassis, leads to an increase in the curb weight with the consequent reduction of the payload up to the possible reduction of homologated seats in case the total weight is the value of the available payload. The available payloads result from the difference between the maximum permissible mass and the mass in running order and have a tolerance of 5%. During the purchase phase, it is necessary to check the weight of the options to be installed on the vehicle.

S= standard O=optional - = unavailable

\*\* = The vehicle in running order must have the fresh water tank filled to 20 liters, using the special drain cock supplied.
